

HOPSCOTCH

Step 1: Draw a hopscotch design on the ground. You can use chalk, a stick or whatever is nearby. Each square should be large enough to fit at least one foot and numbered, usually up to 10.

Step 2: Choose a marker (a flat stone, beanbag or similar object) and toss it to square one. If the marker touches the border of the square or bounces out, you lose your turn and must pass the marker to the next person.

Step 3: Hop to each of the squares, skipping the square that your marker is on. One foot per square, please!

Step 4: If you step on a line, hop into the wrong square or step out of the square, you lose your turn.

Step 5: When you get to the last square, turn around on one foot and hop back to the start in reverse order, picking up your marker on the way back and skipping the square that it was on.

Step 6: Pass the marker to the next person for their turn.

Step 7: Each turn, throw the marker to the next square in line – the first person to get through all the squares successfully wins!
